DETAILED ACTION

Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-29, drawn to an endoscope having a determining device for determining a valid image, classified in class 600, subclass 160.
- II. Claim 30, drawn to an endoscope having multiple clocking speeds by which a storing device operates, classified in class 600, subclass 118.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as an endoscope with a single clock speed by which a storing device operates. See MPEP § 806.05(d).

Election of Species

Group I contains claims directed to the following patentably distinct species of validity determinance structures:

1. claims 2, 5, 14, in which a target image determining device determines whether or not the image is a target image.
2. claims 3, 6-7, 15-16, in which a pixels having a specific color detecting device determines whether or not a threshold has been reached.

Art Unit: 3739

3. claims 4, 26-29, in which a determining device determines whether or not a certain compression ratio has been achieved.
4. claims 8, 17, in which a color distribution detecting device determines whether or not an error threshold has been reached.
5. claims 9-10, 18-19, in which an average luminance value calculating device determines whether or not a threshold has been reached.
6. claims 11, 20, in which an image data difference calculating device determines whether or not a threshold has been reached.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, 1, 12-13, 21-25 generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 3739

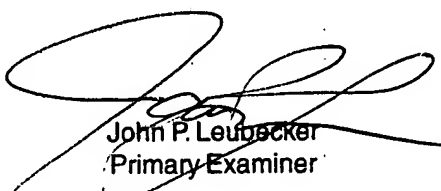

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Philip R. Smith whose telephone number is (571) 272 6087. The examiner can normally be reached on 10:00-6:00.
